

BuildX'26 × Corsair

Build AI Agents with Real-World Integrations

Corsair is an open-source integration layer for AI agents that allows you to connect your applications to tools like GitHub, Gmail, Slack, Google Calendar, Google Drive, HubSpot, Linear, PostHog, Resend, and many more without managing authentication, webhooks, token refreshes, or infrastructure yourself.

Whether you're building an AI startup, automation platform, productivity tool, customer support agent, or developer tool, Corsair can significantly accelerate development.

Why Use Corsair?

Building integrations is often the most time-consuming part of product development.

Instead of spending weeks handling:

- OAuth authentication
- API token management
- Webhook verification
- Data synchronization
- Rate limiting

- Multi-tenant user management

Corsair handles the infrastructure so you can focus on building your product.

What Can You Build?

AI Customer Support Agents

Connect:

- Gmail
- Slack
- Linear
- HubSpot

Example:

"Summarize customer emails, create tickets for urgent issues, and notify the support team."

AI Startup Copilots

Connect:

- GitHub
- Google Calendar
- Slack
- Notion

Example:

"Create a weekly startup progress report and send it to the team."

Sales & CRM Automation

Connect:

- HubSpot
- Gmail
- Google Sheets

Example:

"Automatically follow up with leads that haven't responded in 7 days."

Internal Productivity Tools

Connect:

- Slack
- Google Drive
- GitHub

Example:

"Notify the team when a PR is merged and generate release notes automatically."

Deployment Options

Option 1: Self-Host (Recommended)

Corsair is fully open source.

You can:

- Run it locally
- Deploy on Render
- Deploy on VPS
- Deploy on your own cloud infrastructure

No per-user fees.

No vendor lock-in.

Option 2: Hosted Cloud Version

Corsair also provides hosted deployment options for teams who want to get started quickly.

Supported Integrations

Examples include:

- GitHub
- Gmail
- Slack
- Google Calendar
- Google Drive
- Google Sheets
- Linear
- HubSpot
- PostHog
- Resend

And many more.

Supported AI Frameworks

Corsair works with:

- OpenAI
- Anthropic
- Claude SDK
- Vercel AI SDK
- Mastra
- OpenAI Agents

and other agent frameworks.

Getting Started

1. Install Corsair

```
npm install corsair
```

2. Follow the Quick Start Guide

<https://docs.corsair.dev/getting-started/quick-start>

3. Connect Your First Integration

Examples:

- GitHub
- Gmail
- Slack
- Google Calendar

4. Connect Your AI Agent

Once configured, your AI agent can interact with all connected tools using natural language.

BuildX Recommendation

Corsair is especially useful for teams building:

- AI Agents
- AI SaaS Products
- Productivity Platforms
- CRM Automation Tools
- Developer Tools
- Startup Copilots
- Customer Support Platforms
- Internal Business Automation Systems

If your project requires multiple third-party integrations, Corsair can save significant development time and help you focus on the core product experience.

Happy Building!
