

Week 01

Understanding the Problem Before Building the Solution.

A week 1 build-in-public guide from the FixFlowAI team — covering our research, our observations, and where we're headed.

FixFlowAI · Project Intelligence Workspace Preview

WEEK 1 APPROACH

Why We Spent Week 1 on Research

Most startup teams rush into building features before understanding whether they're solving the right problem. We didn't want to repeat that mistake. So instead of writing a single line of code in Week 1, we spent the entire week mapping the freelance market — talking to people, reading forums, studying the platforms, and documenting what was actually broken.

Typical Approach

- Week 1: Idea Wireframes
- Week 2: Start building features
- Week 3: Realize the problem was wrong
- Week 4: Rebuild from scratch

Our Week 1 Approach

- Week 1: Deep market research
- Mapped real pain from both sides
- Validated the core problem space
- Now building from a clear foundation

Our Research Process

Key Insight:

The right product starts with the right problem. We couldn't find that without first going deep.

WHAT WE DISCOVERED

What the Market Is Really Struggling With

The freelance market isn't broken because of a lack of platforms. It's broken because of how those platforms work. After a week of research, six core problems surfaced consistently across both freelancers and clients.

These aren't new complaints.

They're the same frustrations users have lived with for years. FixFlowAI is built to solve all six.

CLIENT PERSPECTIVE

What Clients Struggle With

Four consistent friction points surfaced from the client side — each one a failure of existing platforms.

Client
Perspective

Who Can I Trust?

01

Verified profiles are rare. Almost anyone can fake credentials. Clients have no reliable way to tell if a freelancer can actually deliver.

Trust gap

Too Many Bad Proposals

02

Most open platforms return hundreds of copy-pasted bids. Real signal is buried under noise. Reviewing becomes a full-time job.

Signal vs. noise

Hiring Takes Too Long

03

Posting a brief, waiting for bids, screening profiles, running interviews — all before a single line of work starts. It can take weeks.

Time to hire

Communication Is Scattered

04

Once work begins, coordination moves across Slack, email, shared drives, and payment tools. Nothing stays in one place.

Coordination

"I just want to hire someone I can trust, quickly, without the noise."

— A recurring sentiment from client-side research

FREELANCER PERSPECTIVE

What Freelancers Struggle With

The other side of the same broken system — four pain points that hit freelancers the hardest.

Freelancer
Perspective

Endless Competition

01

Every decent listing attracts hundreds of bids. Bots, spammers, and underpriced talent flood the pool. Quality work gets lost in the chaos.

Market noise

Platform Fees Eat Earnings

02

Some platforms take up to 20% per contract — before withdrawal fees and payment gateway cuts. Freelancers earn far less than clients pay.

Fee transparency

Payment Risk Is Real

03

Without guaranteed escrow, clients can delay approvals, dispute work, or disappear. Freelancers often work unpaid at significant risk.

Payment safety

Unreliable Clients

04

Scope creep, vague briefs, and late-paying clients are extremely common. There's no system to rate client quality before accepting a project.

Client quality

"I do great work. I just need a system that makes that visible and protects me."

— A recurring sentiment from freelancer-side research

OUR RESPONSE & DIRECTION

How FixFlowAI Responds

FixFlowAI is not another marketplace. It's a trust-first workspace built around the full project lifecycle.

The FixFlowAI Journey

Our Unique Value Propositions

Week 1 taught us something important:

Deeply understanding the problem is just as valuable as building the solution. We know exactly what we're solving. Next up: designing and shipping the MVP.

Next: MVP Development
